# Welcome/Opening Remarks

Teri Takai  
Marjorie Berte

# Enterprise Architecture from a Business Perspective

Lee Mosbrucker

# Enterprise Architecture – Definition

- A management practice for aligning resources to improve business performance and help agencies better execute their core missions. An EA describes the current state to the desired future state.
- A strategic information asset base which defines the business, the information necessary to operate the business, the technologies necessary to support the business operations, and the transitional processes necessary for implementing new technologies in response to the changing business needs

# Enterprise Architecture - Importance

- Enterprise Architecture changes current business and technology by looking at operations across agencies and departments.
- From an enterprise view we establish consistency of policies, standards, and shared services for agency and department project development.
- Through support of our business leaders the blueprint provided by the enterprise architecture helps us realize our state wide strategic vision.

# Enterprise Architecture - Benefits

- Improves alignment of information technology with the state's mission, goals, and objectives.
- Improves statewide service delivery and business operations.
- Lowers costs and improves security, reliability and performance of the state's information technology infrastructure.
- Improves statewide data sharing and systems interoperability.
- More effective use of state resources thereby enabling consistent, effective delivery of services to the employees, citizens, and businesses of California.
- Improves enterprise-wide integration resulting in fewer occurrences of duplicate infrastructure, information silos, and application redundancy.

# Policy Updates

Debbie Leibrock
